

# TABLE OF CONTENTS

CHAPTER 1	INTRODUCTION AND MANUAL OVERVIEW.....	1
1.1	Background.....	1
1.2	Definition of ESD.....	1
1.3	Background on the Use of ESD.....	1
1.4	ESD Site Design Strategies.....	2
1.5	ESD Integrated Management Practices (IMPs).....	3
1.6	Use of the Manual in Conjunction with MDE 2000 Stormwater Management Manual.....	3
1.7	Manual Contents.....	4
CHAPTER 2	BASIC ESD SITE PLANNING CONCEPTS.....	6
2.1	Hydrology as the Integrating Framework for Design.....	6
2.2	Source Control of Stormwater.....	7
2.3	Distributed Controls & Micro-scale Practices... ..	7
2.4	Non-structural Sustainable Control Systems.....	9
2.5	Multifunctional Landscapes and Structures.....	9
CHAPTER 3	ESD SITE PLANNING AND DESIGN PROCESS FOR NEW DEVELOPMENT.....	12
3.1	Conservation & Resource Protection.....	12
3.2	Minimization of Impacts (Better Site Planning).....	21
3.3	Mitigation of Unavoidable Impacts with ESD Practices.....	28
3.4	Pollution Prevention.....	29
Chapter 4	ESD STRATEGIES FOR REDEVELOPMENT AND WATERSHED RETROFITS.....	31
4.1	Redevelopment Strategies.....	31
4.2	Watershed Retrofit Strategies.....	33
CHAPTER 5	PERFORMANCE CRITERIA FOR ESD IMPs.....	38
5.1	ESD IMP 1.0 Bioretention.....	39
5.2	ESD IMP 1.1 Landscape Planter.....	54
5.3	ESD IMP 1.2 Tree Box Filter.....	58
5.4	ESD IMP 2.0 Vegetated Swales.....	61
5.5	ESD IMP 3.0 Permeable Paving.....	68
5.6	ESD IMP 4.0 Gravel Wetland.....	83
5.7	ESD IMP 5.0 Coastal Plain Outfall.....	91
CHAPTER 6	ESD STORMWATER MANAGEMENT CREDITS.....	100
6.1	ESD IMP 6.0 Green Roofs.....	101
6.2	ESD IMP 7.0 Water Harvesting.....	114
6.3	ESD IMP 8.0 Vegetative Filter Strip and Buffers .....	124
6.4	ESD IMP 9.0 Dry Well .....	134

CHAPTER 7 REFERENCES.....137

GLOSSARY.....142

APPENDICES

A. Standards and Specifications.....A-1  
    A.1 Permeable Pavement  
    A.2 Coastal Plain Outfall  
    A.3 Green Roofs  
B. ESD Computational Methods.....B-1  
C. ESD Rain Gardens.....C-1  
D. ESD Case Studies.....D-1  
E. Soils Improvement and Restoration Information.....E-1

## LIST OF TABLES

Table 3.1	Comparison of Development Scenarios
Table 3.2	Listing of Source Control BMPs
Table 4.1	Strategies for Redevelopment Projects
Table 4.2	ESD IMP Applications Matrix
Table 5.1	Hydrologic Soil Properties Classified by Soil Texture
Table 5.2	Permissible Velocities for Channels Lined with Vegetation
Table 5.3	Maximum Allowable Ponding and Storage Depths
Table 5.4	Bioretention Criteria for Length and Width
Table 5.5	Commonly used vegetation in swales
Table 5.6	Cost Comparison showing vegetated swale to pipe, curb, and gutter
Table 5.7	Applications and Performance of Permeable Paving
Table 5.7	Typical Maintenance Activities for Submerged Gravel Wetland Systems
Table 6.1	Comparison of Extensive and Intensive Green roofs
Table 6.2	Storage volumes as a function of media depth
Table 6.3	CN values for various media and rainfall depths
Table 6.4	Typical Costs for Extensive Green Roof
Table 6.5	Typical Costs for Intensive Green Roof
Table 6.6	Comparison of Conventional and LID Land Covers
Table 6.7	Representative LID Curve Numbers
Table E.1	Infiltration Rates for Significant Groupings of Soil Texture, Soil-Water Content, and Compaction Conditions
Table E.2	Comparison of Runoff Volumes for Different Land Use Conditions and Hydrologic Soil Groupings
Table E.3	General relationship of soil bulk density to root growth based on soil texture

## ACKNOWLEDGEMENTS

The Town of Centerville prepared the Corsica River Watershed Restoration Action Strategy (WRAS) report in cooperation with the Queen Anne's County Department of Land Use, Growth Management and Environment, Queen Anne's County Soil Conservation District, Maryland Department of Environment, Maryland Department of Natural Resources, Chester River Association, Natural Resource Conservation Service and others with a state grant in September 2004.

One of the recommendations of the WRAS report was to update the existing SWM Ordinance to encourage Environmental Site Design for new development. The Maryland Department of Environment provided a grant to Queen Anne's County in December 2006 to prepare an Environmental Site Design Manual to implement this recommendation.

The contents of this manual were developed by Ecosite Inc., Columbia, Maryland. Michael Clar, P.E. served as the team leader. The other team members included William Lucas, Anne Guillette and Larry Coffman.

The Queen Anne's County Department of Public Works directed the efforts of the stakeholders group. Vijay Kulkarni served as the team leader. The other County team members included D. Steven Walls, Todd Mohn, John Scarborough, Lee Edgar and John Kling.

The stakeholders group included the following organizations and individuals:

- Maryland Department of the Environment (Danielle Lucid, Adam Rettig, Stewart Comstock and Brian Clevenger)
- The University of Maryland Cooperative Extension Service (Neenah Hope)
- Queen Anne's Soil Conservation District (Toni Riggi)
- Queen Anne's County Department of Land Use, Growth Management and Environment (Katrina Tucker)
- Maryland State Highway Administration (Thomas Revelle)
- Town of Centerville (Chris Clark)
- Corsica River Conservancy (Jim Malaro)
- Chesapeake Heritage Society (Ned Gerber)
- Chester River Association (Tony Prochaska and Robert Parks)
