2018 Annual Drinking Water Quality Report

**Stevensville Water System
MDE Public Water System ID No. 017-0019**

This report is required by the federal Safe Water Drinking Act Amendment of 1996 and is designed to educate our customers about the quality of the water we deliver to you every day. We are pleased to inform you that your drinking water is safe and meets all federal and state requirements. Our constant goal is to provide you with a safe and dependable supply of drinking water. We want you to understand the efforts we make to continually improve the water treatment process and protect our water resources. We are committed to ensuring the quality of your water. We do periodically have iron issues (brown water) which can be an inconvenience, but this situation does not represent any health or safety concerns.

With the interconnection of the Stevensville and Chester water distribution systems in 2010, your water can now be supplied by seven (7) different water treatment facilities drawing groundwater from three different aquifers.

The Stevensville water treatment facility is the primary producer and utilizes groundwater from a 20-inch well 1,590 feet deep into the Lower Patapsco aquifer. The second is the Business Park water treatment facility which utilizes groundwater from a single 12-inch well 1,494 feet deep into the Lower Patapsco aquifer. The third is the Thompson Creek water treatment facility which utilizes groundwater from a single 12-inch well 1,546 feet deep into the Lower Patapsco aquifer. The fourth is the Bayside water treatment facility which utilizes two 10-inch wells 670 feet into the Magothy aquifer. The fifth is the Queen's Landing water treatment facility, which utilizes two 10-inch wells 280 feet deep into the Aquia aquifer. The sixth is the Bridgepointe water treatment facility, which utilizes groundwater from two 6-inch wells 710 feet deep into the Magothy aquifer. The final facility is the Kent Island Village water treatment facility, which utilizes a single 6-inch well 290 feet deep into the Aquia aquifer.

The Sanitary District routinely monitors for constituents in your drinking water according to Federal and State laws. The enclosed table indicates the results of our monitoring for the period of January 1 to December 31, 2017. All drinking water, including bottled drinking water, may reasonably be expected to contain at least a small amount of some constituents. It's important to remember that the presence of these constituents does not necessarily pose a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's Safe Drinking Water Hotline at 1-800-426-4791.

The Environmental Protection Agency (EPA) requires that all public water utilities publish the following two paragraphs:

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/CDC guidelines on appropriate means to lessen the risk of infection by cryptosporidium and other microbiological contaminants are available from the Safe Drinking Water Hotline (1-800-426-4791). *Note: Cryptosporidium is a microbe found in some surface water supplies such as rivers or reservoirs. It is not typically found in groundwater, which is where all of our water supplies originate.*

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. The Sanitary District is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking and cooking. If you are concerned about lead in your drinking water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the EPA Safe Drinking Water Hotlines at 1-800-426-4791 or at <http://www.epa.gov/safewater/lead>. *Note: None of our County water systems have ever had lead issues.*

On the included summary table, you will find many terms and abbreviations you might not be familiar with. To help you better understand these terms we have provided the following definitions:

Non-Detect - laboratory analysis indicates that the constituent is not present.

Parts per million (ppm) - one part per million corresponds to one minute in two years or a single penny in \$10,000. Also equivalent to milligrams per liter (mg/l).

Parts per billion (ppb) - one part per billion corresponds to one minute in 2,000 years, or a single penny in \$10,000,000. Also equivalent to micrograms per liter (µg/l).

Action Level (AL) - the concentration of a contaminant, which, if exceeded, triggers treatment or other requirements that a water system must follow.

Maximum Contaminant Level Goal (MCLG) - The 'Goal' is the level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

Maximum Contaminant Level (MCL) - The 'Maximum Allowed' is the highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.

The Sanitary District's water staff consists of eleven personnel with a combined experience of 70 years. Each operator is required to obtain 30-hours of formal training every three years in water treatment and water distribution operations.

Major decisions affecting the water utility are made by the County Commissioners, sitting as the Sanitary Commission. Should you wish to attend, the Sanitary Commission meets the second Tuesday of the month at 9:00 a.m. in their meeting room located at 107 North Liberty Street, Centreville, Maryland. Sanitary Commission meeting minutes are published and posted on the County's webpage which can be reviewed at www.qac.org.

In our continuing effort to maintain a safe and dependable water supply it is often necessary to make improvements in your water system. The costs of these improvements, as well as the cost to retain experienced staff, are reflected in the small annual rate increases you may experience every July.

We want our customers to be informed about their water utility. If you have any questions about this report or concerning your water utility, feel free to contact me via email at aquimby@qac.org or by calling 410-643-3535.

Very truly yours,

Alan L. Quimby
